

County of Santa Clara  
Public Health Department

Administration  
976 Lenzon Avenue, 2nd Floor  
San José, CA 95126

15 de abril de 2014

Estimados padres y tutores.

El Condado de Santa Clara continúa teniendo uno de los más altos índices de tuberculosis en los Estados Unidos. La tuberculosis es una infección de bacteria que se transmite a través del aire y puede afectar los pulmones, el cerebro, los huesos, o cualquier parte del cuerpo. Los niños se pueden infectar cuando viajan, o cuando otras personas en la casa, familiares o visitantes tienen la infección. Los niños que son expuestos a una persona con tuberculosis tienen un alto riesgo de resultar con tuberculosis activa. Si se diagnostica a tiempo, la tuberculosis se puede tratar, y prevenir su contagio.

En el Condado de Santa Clara, es obligatorio que a los estudiantes que se inscriben para la escuela les hagan la prueba de la tuberculosis. Sin embargo, **partir del 1 de junio de 2014, se requerirá que SÓLO se hagan la prueba los estudiantes cuyo pediatra identifique algún factor de riesgo que indique exposición a la tuberculosis. Antes de inscribirse en la escuela, se requerirá que el pediatra complete el formulario "Santa Clara County Public Health Department Risk Assessment for School Entry", que aquí se incluye. Lleven este formulario para que lo complete el pediatra de su niño, y ya lleno entréguenlo a la escuela. Este requisito es tanto para estudiantes que asisten a escuelas públicas como privadas en el Condado de Santa Clara, y se basa en la autoridad otorgada por el Oficial de Salud del Condado de Santa Clara, de acuerdo al Código de Salud y Seguridad de California, Sección 121515.**

Este nuevo reglamento disminuye el número de pruebas innecesarias, y permite que los pediatras se aseguren que los niños con la infección de tuberculosis sean evaluados y tratados a tiempo.

Gracias por ayudarnos a proteger la salud de sus niños.

Atentamente.

Teeb Al-Samarrai, MD  
Supervisor del Control de la Tuberculosis

## Santa Clara County Public Health Department Tuberculosis (TB) Risk Assessment for School Entry

**This form must be completed by a licensed health professional in the U.S. and returned to the child's school.**

1. Was your child born in, resided, or traveled (for more than one month) to a country with an elevated rate of TB\*?  Yes  No
2. Has your child been in close contact to anyone with tuberculosis (TB) disease in their lifetime?  Yes  No
3. Is your child immunosuppressed; current, or planned? (e.g., due to HIV infection, organ transplant, treatment with TNF-alpha antagonist or high-dose systemic steroids (e.g. prednisone ≥ 15 mg/day for ≥ 2 weeks).  Yes  No

\*Most countries other than the U.S., Canada, Australia, New Zealand, or a country in western or northern Europe. This does not include tourist travel for <1 month (i.e., travel that does not involve visiting family or friends, or involve significant contact with the local population).

**If YES**, to any of the above questions, the child has an increased risk of TB and should have a TB blood test (IGRA, i.e. QuantiFERON or T-SPOT.TB) or a tuberculin skin test (TST) unless there is either 1) a documented prior positive IGRA or TST performed in the U.S. or 2) no new risk factors since last documented negative IGRA (performed at age ≥2 years in the U.S.) or TST (performed at age ≥6 months in the U.S.).

All children with a current or prior positive IGRA/TST result must have a medical evaluation, including a chest x-ray (CXR; posterior-anterior and lateral for children <5 years old is recommended). CXR is not required for children with documented prior treatment for TB disease, documented prior treatment for latent TB infection, or BCG-vaccinated children who have a positive TST and negative IGRA. If there are no symptoms or signs of TB disease and the CXR is normal, the child should be treated for latent TB infection (LTBI) to prevent progression to TB disease.

**Enter test results for all children with a positive risk assessment:**

Interferon Gamma Release Assay (IGRA) Date: _____	Result: <input type="checkbox"/> Negative <input type="checkbox"/> Positive <input type="checkbox"/> Indeterminate
Tuberculin Skin Test (TST/Mantoux/PPD) Date placed: _____ Date read: _____	Induration _____ mm Result: <input type="checkbox"/> Negative <input type="checkbox"/> Positive
Chest X-Ray Date: _____ Impression: <input type="checkbox"/> Normal <input type="checkbox"/> Abnormal	
LTBI Treatment Start Date: _____ <input type="checkbox"/> Rifampin daily - 4 months <input type="checkbox"/> Isoniazid/Rifapentine - weekly X 12 weeks <input type="checkbox"/> Isoniazid daily - 9 months <input type="checkbox"/> Other: _____	<input type="checkbox"/> Prior TB/LTBI treatment (Rx & duration): _____ <input type="checkbox"/> Treatment medically contraindicated <input type="checkbox"/> Declined against medical advice
Please check one of the boxes below and sign: <input type="checkbox"/> Child has no TB symptoms, no risk factors for TB, and does not require a TB test. <input type="checkbox"/> Child has a risk factor, has been evaluated for TB and is free of active TB disease. <input type="checkbox"/> Child has no new risk factors since last negative IGRA/TST and has no symptoms. <input type="checkbox"/> _____
